# Slicing for Presentation

This technique allows you present both a wireframe and material mapped version of your model in one animated clip.

1. Create a teapot.

2. Clone a "Copy" of the teapot and move it to the side.

3. Give each teapot a different material

4. On the first teapot apply a "Slice" modifier.

    a. Set the slice to "Remove Top".

    b. Open the "Slice" modifier and move the gizmo (the orange square) to the top of the teapot.

5. Apply a Slice modifier to the second teapot.

    a. Set the modifier to "Remove Bottom".

    b. Open the Slice modifier and move the gizmo to the top.

6. Turn on the "Auto Key". and move the scrubber to 100.

7. Move gizmo's of each teapot to their bottoms.

8. Close both modifiers.

9. Select both teapots and move them to 0,0,0.

10. Play the animation
