**Advanced Level**
(Point Value - 1 to 15 points)

Advanced 3D Animation projects are more complex than the Intermediate projects. They use multiple modifiers. Animation is more sophisticated. Some of the projects (ABC News Intro) use lighting effects and visibiltiy tracks. The Roman Colloseum requires that you use Adobe Illustrator.

They might require critical thinking skills asking you to decide what to do based on how you want the project to look.

Advanced projects assume that you already know basic 3D Max modeling skills like box modeling, lathing, extruding and applying lights and materials.

The glass bottle uses complex lofting, a multi sub-objects texture, mental ray materials and more.
